Stommel Haus and 3s architects combining contemporary timber construction and architectural excellence

Stommel Haus, German Premium Manufacturer of high quality, energy efficient timber houses and *3s architects*, an architectural practise and interior design consultancy, team up to provide contemporary timber houses with outstanding architectural design.

The **Concept House** was presented to the public for the first time at the Homebuilding & Renovation Show at Sandown Park in Esher at the End of June 2011.

With sustainable living a hot topic of the 21st Century, the architectural design and quality of construction should complement each other in order to provide beautiful and energy efficient homes.

Stommel Haus and *3s architects* teamed up to create a highly designed concept house with flexible interior layouts which are built with healthy, top quality materials to achieve an energy efficient and comfortable sustainable lifestyle.

Barbara Fischer-Clark, Managing Director of *Stommel Haus UK Agency* says: "It is inspiring and great fun to work with the imaginative architects at *3s architects*, who provide not only architectural excellence but also keep an eye on commercial targets. *3s architects* helped us make our dream come true of a contemporary timber house for the British market. The design allows for a great flexibility of the interior layout and size of the house. The architectural design is just simply beautiful! We are looking forward to seeing the first 3s-Stommel house in Britain go up hopefully very soon."

Reinhard Weiss, Managing Director of *3s architects* says: "We aimed for a contemporary and flexible design and an architecture bringing out the best of the wonderful materials used by **Stommel Haus**. The Concept House has four bedrooms and various layout options with 233 m² or 240 m². It is possible to adapt the concept in order to match clients' and planners' requirements and we are looking forward to discussing the options with our future clients. We can't wait to see it being built by *Stommel Haus* who manufacture the houses off-site and erect it in an amazingly short period and also provide the interiors which we would be pleased to design for our clients."

About Stommel Haus

Stommel Haus GmbH is a premium manufacturer of energy efficient, solid timber houses. With 40 years of experience, the family business has proven that building with solid timber, energy efficiency, contemporary design and the attention to quality are no contradiction but lead to providing a modern, ecological and high quality product.

Nestled in the small town of Neunkirchen-Seelscheid near Cologne, Stommel Haus develops and produces their certified timber houses with high precision CNC machines. The houses are transported on site where they are erected by qualified teams and made wind and water tight typically within 5-7 days. The under-floor heating, heat pumps and the interior are then fitted by German craftsmen with only high quality branded products.

Since their foundation 75 years ago, the Stommel family embraced this wonderful material, building timber houses for 40 years with an emphasis on ecological and energy efficient building not only enforced by German building regulations but by the enthusiasm for the natural and healthy material wood used for the benefit of the wellbeing of home owners.

About 3s architects

3s architects is an architectural practise and interior design consultancy providing a full range of architectural design services with an innovative approach. The office undertakes commercial, public and residential projects in the UK and abroad with offices in Richmond and Munich.

architects and designers

3s architects apply individually tailored ideas and imaginative solutions to both commercial and residential ventures. Their expertise has been established from working on projects throughout Europe.

Their philosophy is that architectural excellence is achieved through creativity and imaginative design combined with commercial sense and close teamwork between the client and the design team. Their designers aim to make inspiring environments which add long-term value to the projects.
