High Tech in Wood Stommel Haus at Grand Designs Live 2011

Neunkirchen, Germany, August 2011

High Tech in Wood is presented by Stommel Haus, German Premium Manufacturer of energy efficient and contemporary timber houses at Grand Designs Live in Birmingham in October 2011.

Based on traditional craftsmanship in combination with the latest technology in timber construction and high precision manufacturing, houses of the highest quality and standards can be produced – each and every one to the design requirements of the homeowners and their architects.

It takes a lot of experience, careful selection of sustainable and top quality materials to build such durable and beautiful houses. In order to avoid the need for chemical wood preservation, constructive wood protection methods are applied. These bring out the best of the natural properties of wood: durability, sustainability, energy efficiency and properties supporting the human well being.

The solid heartwood of polar spruce grown in certified forests North of the Arctic Circle is carefully brought to a residual moisture level which is unattractive for insects, bugs or fungi. The timber construction developed exclusively by Stommel Haus avoids twisting and shrinking and makes chemical treatment of the wood obsolete. The energy efficient wall has no sealant membranes which prevents any kind of condensation. That way houses can be built with an unrivalled interior atmosphere which is the trademark of Stommel Haus.

Stommel Haus is proud to present their latest design proposals and top quality product at the renowned exhibition Grand Designs Live in Birmingham, 7th until 9th of October 2011 at **stand number B389** in hall "Grand Build".

About Stommel Haus

Stommel Haus GmbH is a premium manufacturer of energy efficient, solid timber houses. With 40 years of experience, the family business has proven that building with solid timber, energy efficiency, contemporary design and the attention to quality

lead to providing a modern, ecological and high quality product.

Nestled in the small town of Neunkirchen-Seelscheid near Cologne, Stommel Haus develops and produces their certified timber houses with high precision CNC machines. The houses are transported on site where they are erected by qualified teams and made wind and water tight typically within 5-7 days. The under-floor heating, heat pumps and the interior are then fitted by German craftsmen with only high quality branded products.

Since their foundation 75 years ago, the Stommel family embraced this wonderful material, building timber houses for 40 years with an emphasis on ecological and energy efficient building not only enforced by German building regulations but by the enthusiasm for the natural and healthy material wood used for the benefit of the wellbeing of home owners.
