High tech building with timber Stommel Haus presents new generation timber house wall at Grand Designs Live in Birmingham in October 2010

Stommel Haus, German Premium Manufacturer of high quality, energy efficient timber houses presents their new timber house wall design at Grand Designs Live in Birmingham in October 2010.

Neunkirchen, Germany, July 2010

In time for their 75th anniversary, Stommel Haus, German premium manufacturer of timber houses, has developed the next generation of timber house wall for their high energy efficient contemporary timber homes. The wall design complies with the high standards of DIN 68800 which defines construction in wood devoid of any hazardous chemicals. The wall has been certified and will be used for all new Stommel Haus homes built with the "Elementar" wall.

The wall is an energy efficient layered architecture of solid polar spruce heartwood from certified forests in Finland, Fermacell gypsum fibre boards, wood fibreboards and Knauf insulation with Ecosse technology. Without airtight membranes, adhesives or sealants, the Stommel Haus wall provides the house with an unrivalled healthy atmosphere and interior climate.

Stommel Haus celebrated their 75th anniversary in summer 2010. Since their foundation, the Stommel family embraced this wonderful material, building timber houses for 40 years with an emphasis on ecological and energy efficient building. This goal is not only enforced by stringent German building regulations but by the enthusiasm for the natural and healthy material wood, applied for the benefit of the wellbeing of home owners.

Stommel Haus will unveil their latest wall design at Grand Designs Live in Birmingham, 8-10 October 2010 at stand number B389 in hall "Grand Build".

About Stommel Haus

Stommel Haus GmbH is a premium manufacturer of energy efficient, solid timber houses. With 40 years of experience, the family business has proven that building with solid timber, energy efficiency, contemporary design and the attention to quality are no contradiction but lead to providing a modern,

ecological and high quality product.

Nestled in the small town of Neunkirchen-Seelscheid near Cologne, Stommel Haus develops and produces their certified timber houses with high precision CNC machines. The houses are transported on site where they are erected by qualified teams and made wind and water tight typically within 5-7 days. The under-floor heating, heat pumps and the interior are then fitted by German craftsmen with only high quality branded products.

Since their foundation 75 years ago, the Stommel family embraced this wonderful material, building timber houses for 40 years with an emphasis on ecological and energy efficient building not only enforced by German building regulations but by the enthusiasm for the natural and healthy material wood used for the benefit of the wellbeing of home owners.
